# B.E. Chemical(3 ${ }^{\text {rd }}$ Year) Chemical Reaction Engg II I $^{\text {st }}$ Sessional 

Max Marks: 25
Time Allowed : 1.0 Hrs
Attempt All questions .Assume missing data if any.
Date :07/06/2021

I a)Explain the various steps in a catalytic reaction.
b) Give the significance of Thiele Modulus.
c Write a note on physical adsorption and chemisorption.
d) Write briefly on void volume and pore volume distribution methods used for solid catalysts .

II a) Derive concentration of reactant for a single cylindrical pore, first order reaction combined with surface kinetics.
b) The rate law for the hydrogenation (H)of ethylene (E) to form ethane (A) over cobalt molybdenum catalyst is : $-\mathrm{r}_{\mathrm{E}}=\mathrm{kP}_{\mathrm{E}} \mathrm{P}_{\mathrm{H}} /\left(1+\mathrm{K}_{\mathrm{E}} \mathrm{P}_{\mathrm{E}}\right)$. Suggest a mechanism consistent with the rate law .

III The catalytic reaction $\mathrm{A} \rightarrow 4 \mathrm{R}$, is run at $3.28 \mathrm{~atm}, 119^{\circ} \mathrm{C}$ in a plug flow reactor which contains 0.02 Kg of catalyst and uses a feed consisting of partially converted product of $22.5 \mathrm{lt} / \mathrm{hr}$ of pure unreacted A . The results are as follows :

| Run | 1 | 2 | 3 | 4 |
| :--- | :--- | :--- | :--- | :--- |
| $\mathrm{C}_{\text {Ain }} \mathrm{mol} / \mathrm{lt}$ | 0.1 | 0.08 | 0.06 | 0.04 |
| $\mathrm{C}_{\text {Aout }} \mathrm{mol} / \mathrm{lt}$ | 0.084 | 0.07 | 0.055 | 0.038. |

Find a rate equation to represent this reaction.
